SOCIETY CONFERENCE

OAXACA, MEXICO | OCT 5-8, 2025

Popocatepetl

Pinus devoniana

Dahlia imperialis

Salvia

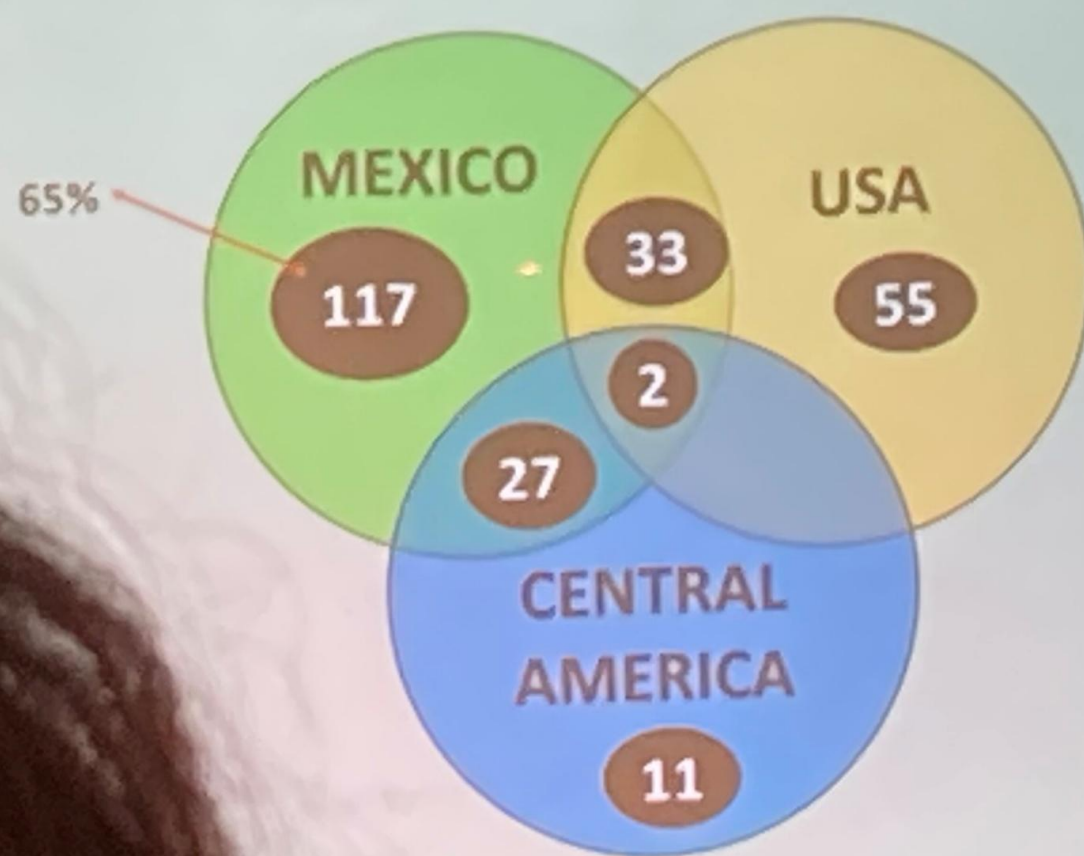

Tagetes lucida

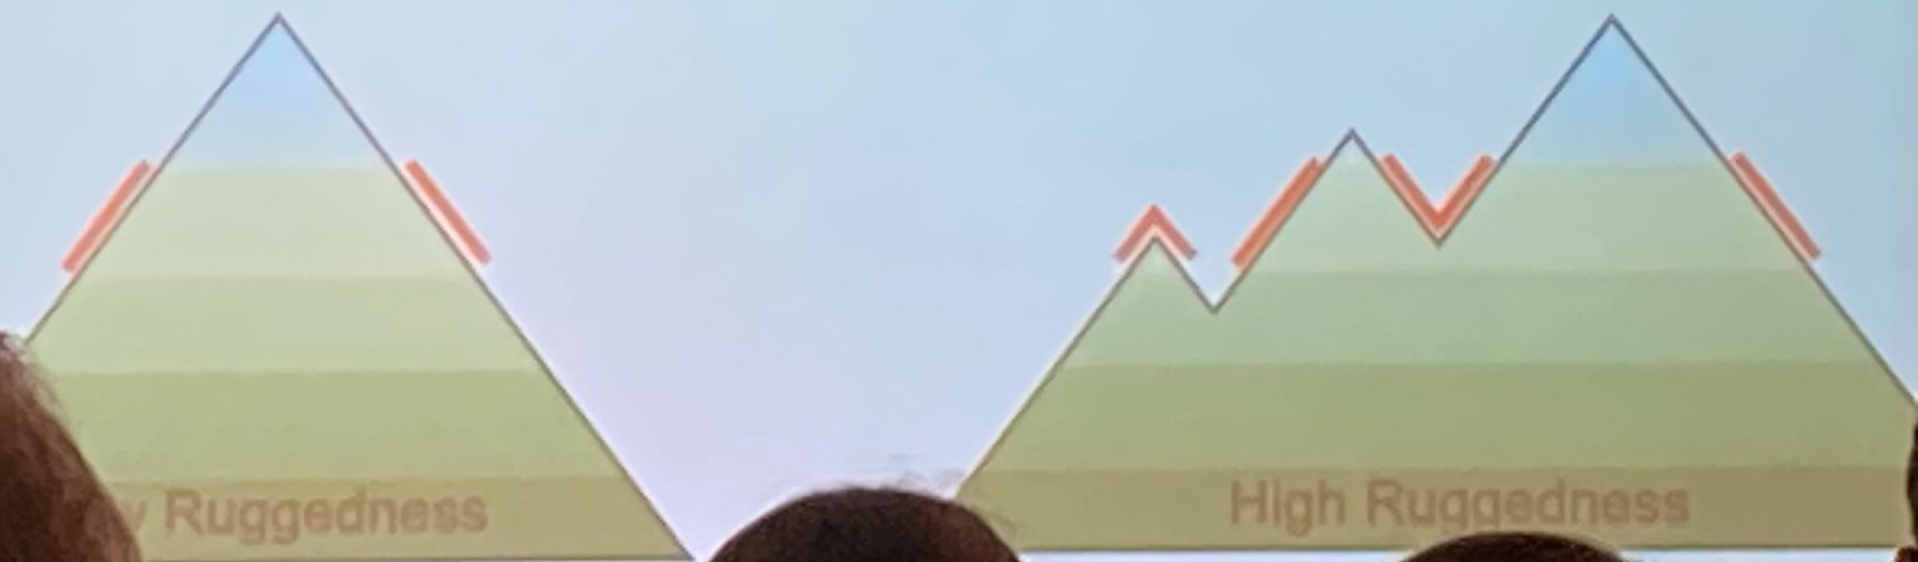

Quercus obtusata

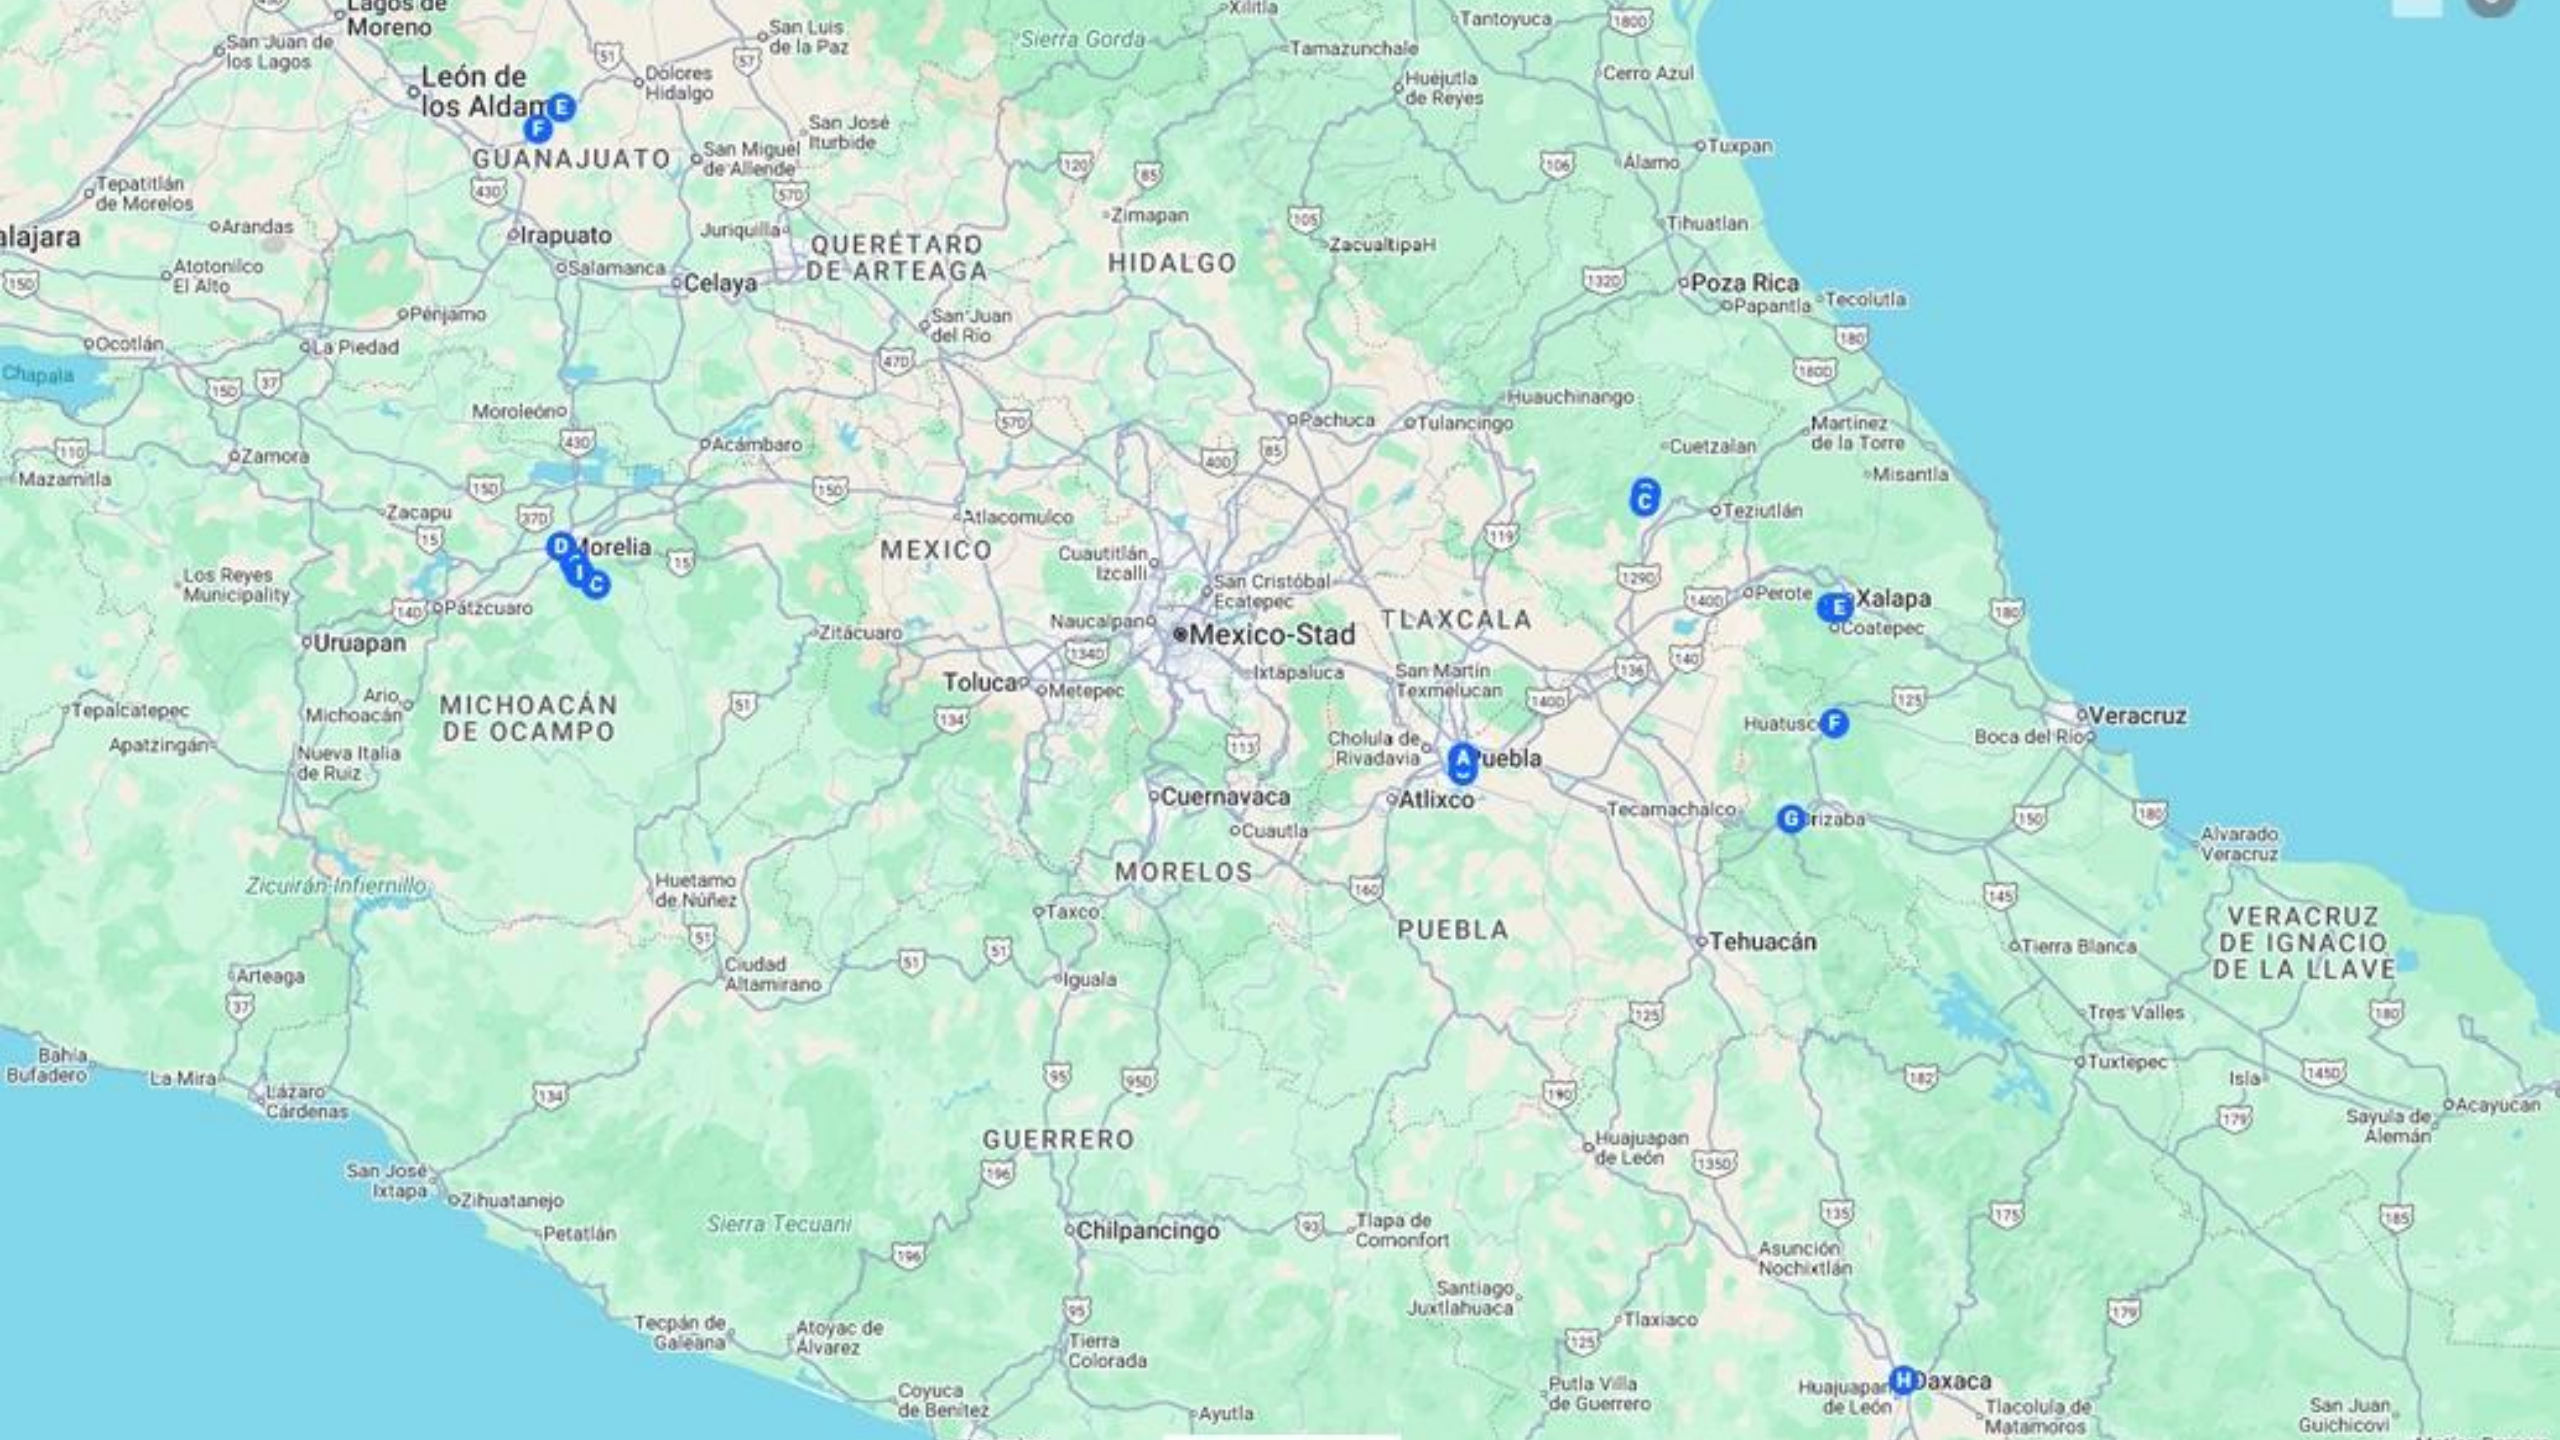

Distribution of mexican oak species

What role did mountains play in oak diversification?

- Speciation rates are higher in montane regions than in lowland regions, and is related to high amounts of terrain ruggedness
- Two reasons why mountains & terrain increase speciation:
 - 1) Mountains compress the spatial scale of environmental gradients
 - 2) Habitat heterogeneity creates patchy suitable habitat, and thus, barriers to gene flow
